                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention relates to a novel method for altering one or more plant characteristics. Specifically, it refers to identifying genes that are up or down-regulated in transgenic plants overexpressing the heterodimeric E2Fa/DPa transcription factor of Arabidopsis and using these sequences to alter plant characteristics accordingly. The present invention describes generating transgenic plants for the production of growth regulators, can make the products of the present invention describes of enzymes, therapeutics, pharmaceuticals and animal feed products, where the altered plant characteristics are selected from increased yield or blomass, enhanced survival capacity, stress tolerance, plant architecture or physiology, altered endoreduplication, blochemistry, signal transduction, storage lipid mobilisation and/or altered photosynthesis, each relative to the corresponding wild type plants. Accordingly, these sequences can also be useful as positive or negative selectable markers can also be useful as positive or negative selectable markers during transformation of cells or tissues. The identified genes play a cole in a variety of biological processes such as DNA replication, cell wall blosynthesis, nitrogen and/or carbon metabolism or they function as transcription factors. This polypeptide sequence is thale cress protein expressed by a gene upregulated 1.3 fold or more in plants overexpressing the nearest protein are protein and protein and plants overexpressing the nearest protein are selectable markers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Best Local Sir

content. Thi polypeptide invention.
                                            plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert polypeptide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    plant protectant; plant growth regulant; gene therapy; plant; recombinant DNA construct; physical array; plant breeding marker; cold tolerance; heat tolerance; drought tolerance; herbicide tolerance; extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; disease resistance;
                                                                                                                                                                                                                                                                                                                                                                                                                                New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens pests, for conferring increased resistance to plant disease, or for

Arabidopsis, wheat and rape but the specification does not indicate whi sequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming plant with a recombinant DNA construct comprising a promoter region functional in a plant cell operably joined to a polynucleotide encoding polypeptide associated with the property, and growing the transformed plant. The property is selected from improving plant cold tolerance, fo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New recombinant DNA constructs useful in the field of biochemistry genetics, and in particular for producing transgenic plants with in

                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC manipulating growth rate in plant cells by modification of the cell cycle pathway, for improving plant drought tolerance, for providing increased consistence to plant disease, for galactomannan production, for production of plant growth regulators, for improving plant heat tolerance, for improving plant tolerance to herbicides, for increasing the rate of conditions production in plants, for light production, for improving plant tolerance to extreme osmotic conditions, for improving plant conditions, for improving plant tolerance to pathogens or pests, for yield improvement by modification of photosynthesis, for modifying seed oil yield and/or content, for conditions in plants, for proving plant conditions in proving plant conditions of carbohydrate, nitrogen or phosphorus use and/or uptake and for yield improvement by providing improved plant growth and conditionation of carbohydrate, nitrogen or phosphorus use and/or uptake and for yield improvement by providing improved plant growth and conditions of the present invention are useful in the field of biochemistry and genetics, in particular for producing transgenic plants with improved biological characteristics such as increased yield, improved nitrogen conditions, increasing plant tolerance to cold or heat, improving plant colerance to plant pests or pathogens. They can also be used in physical conditions of molecules, plant breading markers, computer-based storage and conditions of the systems. The present sequence is one of the 5544 plant protein content of the norited anectification but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                밁
                                                                                                                                                                                                           श
                                                                                                                                                                                                                                                                                                                                          The invention describes a recombinant DNA construct comprising a polymucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polymucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, recombination in plants, for improving yield by modification of plant of plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert of homologic invention.

The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lignin or plant growth regulators, for increasing the rate of homologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      plant protectant; plant growth regulant; gene therapy; plant; recombinant DNA construct; physical array; plant breeding marker; cold tolerance; heat tolerance; drought tolerance; herbicide tolerance; extreme osmotic condition; pathogen tolerance; pest tolerance; growth rate; cell cycle pathway; disease resistance; galactomannan production; lignin production; plant growth regulator; galactomannan production; lignin production; plant growth regulator;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New recombinant DNA construct, useful for improving plant tolerance cold, heat, drought, herbicides, extreme osmotic conditions, pathoge pests, for conferring increased resistance to plant disease, or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         06-MAY-1999;

                                                 S
                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                         Arabidopsis, wheat and rape but the specification does not indicate which consequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming a complaint with a recombinant DNA construct comprising a promoter region complaint with a recombinant DNA construct comprising a promoter region complaint with a recombinant DNA construct comprising a promoter region complaint in a plant cell operably joined to a polymucleotide encoding a complaint of the property is selected from improving plant cold tolerance, for plant in growth rate in plant cells by modification of the cell cycle comparished to plant disease, for galactomannan production, for providing increased comproving plant tolerance, for improving plant tolerance, for improving plant tolerance, for improving plant tolerance to herbicides, for increasing the rate of comproving plant tolerance to extreme osmotic conditions, for improving plant tolerance to pathogens or pests, for lignin production, for improving composition of carbohydrate, nitrogen or phosphorus use and/or uptake and for yield improvement by modification of carbohydrate, nitrogen or phosphorus use and/or uptake conditions of also encode a plant transcription factor. The methods and compositions of consostitions of also encode a plant transcription factor. The methods and compositions of consostitions of also encode a plant transcription factor. The methods and compositions of the consostitions of also encode a plant transcription factor. The methods and compositions of the consostitions                                                                                                                                                                                                                                                                                                                                                                                                                                       also encode a plant transcription factor. The methods and compositions of the present invention are useful in the field of biochemistry and genetics, in particular for producing transgenic plants with improved biological characteristics such as increased yield, improved nitrogen flow, increasing plant tolerance to cold or heat, improving plant tolerance to extreme osmotic and drought conditions, and improving plant tolerance to plant pests or pathogens. They can also be used in physical arrays of molecules, plant breeding markers, computer-based storage and analysis systems. The present sequence of the 5544 plant protein sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at
                                                                                                                                                                                                                                                                                                                                                      Sequence 325 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates a recombinant DNA construct comprising a polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO: 1-5544) and encoding a polypeptide with any of 5544 amino acid sequences (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     28-APR-2003; 2003US-00424599 28-APR-2003; 2003US-00425115
                                                                                                                                                                                                                                                                                                                                                                                                             seqdata.uspto.gov/sequence.html?DocID=20040216190
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    biological characteristics.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
The invention relates a recombinant DNA construct comprising a polynucleotide having any of 5544 nucleotide sequences (cDNAs SEQ ID NO: 1-544) and encoding a polypeptide with any of 5544 amino acid sequences (SEQ ID NO: 5545-11088). The cDNAs and proteins are from corn, soybean, arabidopsis, wheat and rape but the specification does not indicate which sequences is derived from which organism. Also included is a method of producing a plant having an improved property, comprising transforming a plant with a recombinant DNA construct comprising a promoter region functional in a plant cell operably joined to a polynucleotide encoding a polypeptide associated with the property, and growing the transformed plant. The property is selected from improving plant cold tolerance, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for improving plant drought tolerance, for production of plant growth regulators, for improving plant tolerance, for improving plant tolerance, for plant disease, for galactomannan production, for production of plant growth regulators, for improving plant tolerance, for improving plant tolerance, for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New recombinant DNA constructs useful in the field of biochemistry and genetics, and in particular for producing transgenic plants with improbiological characteristics.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Plant; transgenic; cold tolerance; growth rate; drought tolerance; disease resistance; galactomannan production; plant growth regulator; heat tolerance; herbicide tolerance; lignin production; extreme osmotic condition tolerance; pathogens resistance; pest resistance; yield improvement; seed oil yield; seed protein yield.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2004-757369/74.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC plant tolerance to extreme osmotic conditions, for improving tolerance to pathogens or pests, for yield improvement by modification of modifying seed oil yield and/or content, for modifying seed protesynthesis, for modifying seed oil yield and/or content, for modification of carbohydrate, nitrogen or phosphorus use and/or uptake conditioation of carbohydrate, nitrogen or phosphorus use and/or uptake conditioation of carbohydrate, nitrogen or phosphorus use and/or uptake conditioation of carbohydrate, nitrogen or phosphorus use and/or uptake conditioation of the provent and compositions of convert under at least one stress condition. The polynucleotide may calso encode a plant transcription factor. The methods and compositions of the present invention are useful in the field of biochemistry and control of the present invention are useful in the field of biochemistry and control of the present invention are useful in the field of biochemistry and control of the same to plant tolerance to cold or heat, improving plant colerance to plant tolerance to cold or heat, improving plant colerance to plant pests or pathogens. They can also be used in physical carrays of molecules, plant breeding markers, computer-based storage and control of the invention. Note: The sequence data for this patent did cont form part of the printed specification, but was obtained in celectronic format directly from USPTO at sequence.html?DocID=20040216190.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match 12.5

                                                                                                                     The invention describes a recombinant DNA construct comprising a polynucleotide consisting of a sequence encoding an amino acid sequence available in electronic form from the US patent office at ftp.seqdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide of the invention are also useful in physical arrays of molecules and as plant breeding markers. The recombinant DNA construct is useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for manipulating growth rate in plant cells by modification of the cell cycle pathway, for conferring increased resistance to plant disease, for producing galactomannan, lignin or plant growth regulators, for increasing the rate of homologous recombination in plants, for improving yield by modification of photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake or the proposition of the cell cycle pathway.
                                                      or by providing improved plant growth and development under at least one stress condition or for modifying seed oil or protein yield and/or content. This is the amino acid sequence of a plant full length insert polypeptide that can be used in the recombinant DNA construct of the
                                                                                                                                                                                                                                                                                                                                                                                                                                cold, heat, drought, herbicides, extreme or pests, for conferring increased resistance
                                                                                                                                                                                                                                                                                                                                                                                                                                   New recombinant DNA construct, useful for improving plant tolerance to cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or pests, for conferring increased resistance to plant disease, or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              06-MAY-1999; 99US-00304517.

               Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                   521.5

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 6, Application US/09744016A
PATENT NO. 6875581
GENERAL INFORMATION:
APPLICANT: Dr. Voelkel, Helge
TITLE OF INVENTION: Method for screening of modulators of calcineurin
TITLE OF INVENTION: activity
FILE REFERENCE: A34157PCT
CURRENT FILING DATE: 2001-10-03
PRIOR APPLICATION NUMBER: EP98113876
PRIOR APPLICATION NUMBER: EP98113876
PRIOR FILING DATE: 1998-07-22

Sequence 21, Application US/09744016A

Patent No. 6875581

Patent No. 6875581

GENERAL IMPORMATION:
APPLICANT: Dr. Voelkel, Helge
ITILE OF INVENTION: Method for screening of modulators of calcineurin
TITLE OF INVENTION: activity
PILE REFERENCE: A34157PCT
CURRENT APPLICATION NUMBER: US/09/744,016A

CURRENT ETLING DATE: 2001-10-03
PRIOR APPLICATION NUMBER: EP98113876
PRIOR APPLICATION NUMBER: EP98113876
PRIOR FILING DATE: 1998-07-22
NUMBER OF SEQ ID NOS: 35
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 21

```
; LENGTH: 533

GENERAL INFORMATION:

APPLICANY: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

PILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT PILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR FILING DATE: 2000-10-03

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOPTWARE: PASESEQ for Windows Version 4.0
